

GIVE ICY ROADS THE BOOT!

It's the adjustments in the Elkin Tailgate Spreader, Model 2100, that make the difference. Consider the following unique features that Elkin has incorporated into their design...the flexible rubber boot versus the rigid steel trough prevents jamming, reduces wear and improves material flow. The adjustable offset bearing

and motor plates reduce material buildup and corrosion while permitting the auger to be raised and lowered against the boot. See the photo above for more reasons that the Elkin Tailgate Spreader is the ONE to "Give Icy Roads the Boot" this winter. Spreader comes with a 2-year warranty.
